Brass Lead-Free Fittings

The Right Connection®

LEAD-FREE FITTINGS ARE NSF® CERTIFIED

Potable water systems provide water suitable for human consumption such as drinking, food preparation, and dish washing. The Safe Drinking Water Act limits the lead content of components installed in potable water systems to 0.25% weighted average.

Dixon-manufactured lead-free parts, made with brass alloy C27450, are NSF®/ANSI 61 certified.

Certification ensures that our lead-free products meet the regulatory requirements for drinking water system components for the U.S. and Canada. The NSF mark on each part is your assurance that the product has been tested by a respected independent certification organization.

Our offering targets a selection of popular configurations and sizes in our standard hose, lok-on hose, pipe, and garden hose fittings.

Lead-Free Product Series

102 Lead-Free – Hose Barb x Male NPTF
